

**A SECURITY DEVICE FOR GOOSENECK TRAILERS, TRAILER HITCHES,
AND SIMILAR ARTICLES**

Abstract of the Disclosure

A security device used with trailers comprising first and second attached security chambers, the first chamber providing a security bolt orifice allowing insertion of a security bolt. A security pin orifice bored through one side of the chamber allows insertion of a security pin. The second chamber provides security bolt orifices to also allow insertion of the security bolt. A lock is inserted 5 into the first chamber, with a lock body portion dimensioned to fit within the proximal interior portion of the first chamber, and a non-linear shackle portion dimensioned to fit within the distal interior portion of the first chamber. A security bar having a security bolt orifice bored therethrough permits traversing of the bar by the security bolt. The security bar is dimensioned to allow its insertion within the second chamber and unimpeded passage of the security bolt through the bar's 10 bolt orifice.
